

There was lots of Action

On July 10, 2017, in fear for his life the “security guard” headed to the pasture to get away from all the action at the Build!

The earthmoving equipment was working very hard with the construction surveyor constantly measuring and guiding the excavator operator in the accuracy of the removal of dirt. The piles of dirt are getting higher and higher.

Then there was a crew removing all the felled trees. The excavator was moving quickly toward those trees and they had to clear this spot on the north side of the site. Several loads of trees were loaded onto a trailer with a smaller Bobcat and removed from the premises, and did it ever work.
